# PROGRESS IN SURFACE SCIENCE, VOLUME 29

## SUBJECT INDEX

Adsorption experiments, semiconductor/electrolyte interface simulation and 92-97
Ag layers on Al, surface polariton dispersion and and 183-186

Bulk plane waves, diffracted wave fields and 218-225
Bulk radiation
  by surface polaritons 209-210
  surface polariton conversion into 233-236, 251-255

Catalysis, chalcogenides and 123, 135-138
Chalgogenides
  in catalysis 135-138
  electronic structure of 19-23
    chevrel-type phases 30-31
    layered semicoductors 24-27
    one-dimensional semiconductors 31-32
    pyrite-type semiconductors 27-29
  structure types of
    chevrel-type 15-17
    layered 6-12
    one-dimensional 17-19
    pyrite-type 12-14
Charge carriers
  at surfaces 50-52
  interfacial dynamics of 54-57
  light excitation of 70-71
  trapping and detrapping of 50-52
Charge transfer processes 52-54
Chevrel-type phases
  electronic structure of 30-31
  intercalation of 33
(Chevrel-type, cont.)
  structure of 15-17
Cluster compounds
  (photo)electrochemical studies of 120-123
  interfacial processes of 117-124
Conversion coefficients
  surface polariton to bulk radiation and 251-255
Conversion efficiency
  surface polariton into bulk radiation
    incident to impedance step 233-236
Cyclic voltammetry, 74-75

Dichalcogenide structures
  chevrel-type 15-17
  layered 6-12
  one-dimensional 17-19
  pyrite-type 12-14, 15
Diffraction
  of electromagnetic waves, surface and bulk 199-229
    experimental observation of 194-199
    general characteristics of 174-178
    nonlinear 301-313
    by semi-infinite film with spatial dispersion 256-267
Diffraction problem
  numerical solution of 308-311
Dispersion
  curve splitting in infrared region and 187-190
  of surface polariton 178-183

Edge condition, wave incidence onto step and 204-207
Edge modes, effect of, 270-277

Effective boundary condition
normal incidence onto step and 199
oblique incidence of surface polaritons and 242-243
surface polariton diffraction and 256-260
Electric techniques, in surface characterization 66-71
Kelvin probe 69
light excitation charge carriers 70-71
microwave conductivity measurement 70-71
van der Pauw contact method 70
Electrochemical techniques
cyclic voltammetry 73-75
experimental setup for 72-73
impedance measurements in 73-75
laser pulse photoresponse measurements 77
step perturbation 75-76
Electromagetic waves
diffraction of 199-277
normal incidence of, onto step 199-229
oblique incidence of
onto interferometer boundary 296-301
onto semi-infinite film 256-267
surface polariton and 242-255
transformation of, by impedance step 229-242
Electronic structure
Coulomb potentials of atomic orbitals and 20-23
electron interaction contribution to 22-23
of layered semiconductors 24-27
LCAO approach to 19-20
Energy transformation coefficients 230-232, 238
of reflection and transmission 265-267
surface polariton dispersion and 263-264
Excitation
by surface polaritons 210-218
by bulk polaritons 218-225

Fabry-Perot interferometer
normal incidence onto film edge and 277-296
oblique incidence onto boundary and 296-302
Fields
diffracted, by surface polaritons 210-218 210-218
wave, bulk waves and 218-225
Frequency dependence
conversion of incident surface polariton into bulk radiation and 236-238

Hydrometallurgy, metal sulfide interfaces and 126-128

Impedance approximation
in diffraction of surface and bulk electromagnetic waves 225-229
Impedance measurements, 73-75
Impedance step
wave transformation by 229-242
conversion efficiency and, surface polariton into bulk radiation 233-236
resonance effects and 236-239
specular reflection anomalies and 239-242
time-averaged power flow of surface wave and 229-230
transformation coefficients and 230-232
surface polariton from clean metal surface and 203-204
Incidence
Fabry-Perot interferometer and 277-301
normal
onto film edge 277-296
onto step 199-229
oblique, onto interferometer boundary 296-301
onto impedance step 203-204
diffracted fields and, excited 210-225
edge condition and 204-207
from film-coated metal surface 208-209

(Incidence, cont.)
impedance approximation and 225-229
onto step
effective boundary conditions and 199-201
general equation for 201-203
Intercalation
of layered compounds 104-106
of semiconductor/metal interface 105-106
of transition metal compounds 32-33
Interfacial chemistry
hydrometallurgy and 126-128
pollution control and 133-135
Interfacial coordination chemistry 138-144
Interfacial problems, at sulfide interfaces 126-135
Interfacial processes
in cluster compounds 117-118
characterisation problems and 124
in material research 119-120
multielectron transfer catalysis and 123
photoelectrochemical studies of 120-123
in layered compounds
at electrolyte interfaces 88-99
photochemical properties of 78-88
of semiconductor/metals 99-106
in pyrite compounds
interfacial coordination photoelectrochemistry of 110-111
photoelectrochemical properties of 106-109
surface studies of 111-117

Kelvin probe 69
Kinetics
of charge carriers
interfacial 54-57
at surfaces 50-52
of charge transfer processes 52-54

Laser pulse photoresponse measurements 77
Layered compounds
intercalation of 104-106
interfacial processes of 78-88
Layered dichalcogenide structures 6-12
Layered semiconductors
electronic structure of 24-27
intercalation of 33
interfacial processes of 78-88
properties of 25-26
surface spectroscopy characterization of 88-99
surface structure of 6-12
Light excitation charge carriers, in surface characterization 70-71

Metal sulfide interfaces, mineral bio-geochemistry and 124-126
Microoganisms, metal sulfide interface leaching by 128-133
Microwave conductivity measurement, in surface characterization 70-71

One-dimensional semiconductors
electronic structure of 31-32
surface structure of 17-19
Optical techniques, in surface characterization 66, 67
Oxidation reactions
in layered structures 89-90, 91
SEM microprobe analysis and 91
XPS and 90-91
Perturbation, step, in semiconductor electrochemistry 75-76
Pollution control, interfacial chemistry of sulfide interfaces and 133-135
Pyrite compounds
electronic structure of 27-29

(Pyrite compounds, cont.)
interfacial processes of 110-111
(photo)electrochemical properties of 106-109
properties of 29
structure of 12-14, 15
surface studies of 111
LEED 116
SXPS 116-117
XPS 112-115

Reactivity
of pyrite compound surfaces 112-117
of semiconductor/electrolyte interfaces 89-97
of semiconductor/metal interfaces 99-106
Reflection and transmission coefficients, surface polariton diffraction and 265-267
Resonance effects, incident to impedance step 236-239
Resonance region, surface polariton dispersion in 173-178

S120 dye on silver
surface polariton dispersion and 178-183
Semiconductor/adsorbate interfaces
extrinsic surface states and 39-40
surface charge layers and 40-43
thermodynamics of 39-43
Semiconductor/electrolyte interfaces
Fermi level pinning and 47-49
(photo)electrochemical techniques and 78-88
Schottky barrier model and, idealized 43-47
simulation of
$H^2O$ absorption and 92-93
halogen absorption and 95-99
surface spectroscopy characterization of 88-99
thermodynamics of 43-49

Semiconductor interfaces
kinetics of 49-57
surface characterization techniques and 57-60
electric 66-71
in-situ 67
optical 66, 67
UHV 60-66
thermodynamics of 34-39
Semiconductor/metal interfaces
thermodynamics of, intercalation reactions and 104-107
Semiconductors, electrochemical techniques in 72-77
Semi-infinite film, with spatial dispersion, surface polariton diffration by 256-277
Specular reflection, of bulk waves 239-242
Sulfide interfaces
chemistry of and pollution control 133-135
hydrometallurgy interfacial problems and 126-128
leaching microorganisms and 128-133
in natural environments 124-126
Surface characterization
electric techniques of 66-71
of layered semiconductors 88-99
optical techniques of 66, 67
of pyrite compounds 112-117
spectroscopic methods for 60-66
Surface polariton dispersion
diffraction characteristics and 174-178
investigations of 178-198
additional surface polaritons and 190-194
Ag layers on Al and 183-186
curve splitting in infrared region 187-190
S120 dye on silver and 178-183
in resonance region 173-178
Surface polaritons
diffraction of 174-178, 194-199, 199-276, 301-313

(Surface polaritons, cont.)
dispersion of 173-199
Fabry-Perot type interferometer for 277-301
incidence of, from film-coated surface 208-209
incident to impedance step conversion efficiency into bulk radiation 233-236
nonlinear diffraction of 301-313
oblique incidence of 242-255
conversison coefficients, surface polariton to bulk radiation 251-255
effective boundary condition and 242-243
incidence onto impedance step and 244-246
transmission and reflection coefficients and 249-251

surface electromagnetic waves and 296-298
tranformation coefficients and 230-232
Surface spectroscopies
pyrite compounds and
LEED 116
SXPS 116-117
XPS 112-115
in semiconductor/electrolyte interfaces 98-99
characterization of 88-89
reacted characterization and 89-91, 97
simulation and 92-97
in semiconductor interfaces 60-66, 67
in semiconductor/metal reactivity 99-106
LEED and 102-103
SXPS and 103
XPS and 103
Surface wave guide modes 298-301

Thermodynamics
of clean semiconductors
electronic structure of 36-38
preparation of 34-36
of semiconductor/adsorbate interfaces
(Thermodynamics, cont.
extrinsic surface states of 39-40
surface charge layers of 40-43
of semiconductor/electrolyte interfaces
Fermi level pinning and 47-49
idealized Schottky barrier model 43-47
of semiconductor/metal intercalation reactions 104-107
Time-averaged power flow of surface wave 229-230
Transformation coefficients
edge mode effect on 270-277
incident to impedance step 230-232, 238
surface polariton diffraction and 267-269
Transmission and reflection coefficients, oblique 249-251
Transmission coefficients
interference phenomena and 287-290
onto interferometer boundary 290-296
for surface polaritons 285-296

Ultra-high vaccum (UHV) techniques
in electrolyte interface characterization 88-99
adsorption experiements and 92-97
oxidation reactions and 89-91
semiconductor/electrolyte junction simulation in 92-97
of semiconductor/metal reactivity 99-106
LEED and 102-103
SXPS and 103
XPS and 103
XP- spectra and 101-102
in surface characterization 60-66
LEED 63-64, 116
LEISS 64-66
UPS 60-63
SXPS 116-117
XPS 60-63, 112-115

van der Pauw method, 70
Vibrations, transition layer, and surface polariton dispersion 173-199

Wave transformation
by impedance step 229-242
conversion efficiency and 233-236
resonance effects of 236-239
(Wave transform., cont.)
specular reflection anomalies of 239-242
time-averaged power flow and 229-230
transformation coefficients and 230-232
Waves, surface electromagnetic oblique incidence of 296-301
